
Job Description

Industrial Automation Programmer

About Select Technologies, Inc.

Incorporated in 1991, Select Technologies (STI) is a full service industrial automation integrator which specializes in a wide range of services that include system design, panel building, installation and startup. Select Technologies is currently accepting resumes for an Industrial Automation Programmer.

Responsibilities

At Select Technologies, Inc. an Industrial Automation Programmer's primary responsibilities include, but are not limited to the following areas: The ability to design, code, troubleshoot and fully document control logic for a wide variety of industrial equipment. This equipment ranges from critical HVAC, conveyor and palletizing systems to air, steam and gas engine room systems. The candidate must be available to travel to customer locations throughout the United States for project startups and service. The candidate will also have the capacity to work independently on smaller isolated jobs or with a team on larger integrated projects. The ideal candidate will have strong written and oral skills with the aptitude to engage customers on a technical, professional and personal level.

Minimum Requirements

- Technical, Associates or Bachelor Degree in a related field
- 1 - 5+ Years Automation / Controls programming experience
- HMI / SCADA programming experience
- Basic understanding of computer hardware and software
